**ABSTRAK**

Pelayanan kesehatan selama masa kehamilan, persalinan, nifas sangat penting bagi keberlangsungan hidup ibu dan bayi, termasuk dalam upaya menurunkan angka kematian ibu dan bayi. Tujuan dari Laporan Tugas Akhir ini adalah melakukan asuhan kebidanan komprehensif dari masa hamil, bersalin, nifas dan neonatus pada Ny. C. Asuhan kebidanan yang diberikan dimulai dari usia kehamilan 35 minggu sampai 30 hari masa nifas dengan kunjungan kehamilan sebanyak 3 kali, persalinan, nifas 3 kali dan neonatus 3 kali. Selama proses kehamilan Ny.C mengalami keluhan nyeri punggung hal ini dapat diatasi dengan asuhan kebidanan yang diberikan. Persalinan Ny.C berlangsung spontan dengan rupture perineum derajat dua dan usia kehamilan 40 minggu. Bayi Ny.C lahir spontan jenis kelamin laki-laki dengan berat 3.300 gram dan panjang badan 49 cm. pada masa nifas Ny. C mengalami beberapa keluhan yang didapatkan ASI belum lancar dan nyeri padalukabekasjahitan, dengan asuhan yang diberikan masalah dapat diatasi. Pada kunjungan neonatus tidak terdapat ketidak nyamanan, masalah ataupun komplikasi pada bayi Ny.C. Diharapkan bagi bidan untuk dapat mempertahankan mutu layanan dalam memberikan pelayanan kebidanan secara komprehensif dimulai dari masa kehamilan, persalinan, neonatus (BBL) dan nifas termasuk didalamnya keluarga berencana.

**ABSTRACT**

*Health service during pregnancy, giving birth, and childbed are very important for mothers and babies survival, including efforts to reduce maternal and infant mortality. This final report aims to do comprehensive midwifery care during pregnancy, giving birth, childbed, and neonates for Mrs. C. The midwifery care given was started from 35-week gestational age to 30 days childbed moments with three times pregnancy visits, giving birth, three times childbed moments, and three times neonates. During pregnancy, Mrs. C had a complaint of having backache which could be overcome by midwifery care given. The birth delivery of Mrs. C was done spontaneously with two-degree perineum rupture and 40-week gestational age. Mrs. C's baby was born spontaneously. His weight was 3,300 gram and his length was 49 centimeters. During childbed, Mrs. C mentioned some complaints such as her breast milk did not flow fast and she had some pains on the scar tissue. However, the problem could be overcome by some cares. On the neonates visit, there was not any inconveniences, problems, or complications for Mrs. C's baby. It is suggested for the midwives to maintain quality services in giving midwifery care comprehensively started from during pregnancy, giving birth, neonates (BBL), childbed, and also family planning.*
