### **INTISARI**

Upaya penanganan *stunting* terus dilakukan dari berbagai sektor namun hal ini terhambat karena pandemi *Covid-19*. Kelurahan Tirta Siak Kecamatan Payung Sekaki Kota Pekanbaru merupakan lokasi khusus *stunting*. Pendeteksian balita *stunting* di posyandu dialihkan menjadi kegiatan *home visit*. Penelitian ini bertujuan untuk mengetahui gambaran *home visit* kader posyandu terkait pendeteksian balita *stunting* sebagai dampak pandemi *Covid-19*. Penelitian ini menggunakan metode kualitatif deskriptif. Data yang digunakan berupa data primer yang diperoleh dengan wawancara dan observasi langsung dengan satu orang kader posyandu. Data disajikan dalam bentuk narasi dan matriks kemudian dibandingkan antara konsep pernyataan informan dengan konsep teori terkait.

Hasil penelitian didapatkan kegiatan *home visit* menjadi alternatif posyandu saat pandemi *Covid-19*. Kegiatan meliputi pengukuran antropometri yang dicatat pada laporan bulanan kader posyandu kemudian kader posyandu melaporkan data ke Ahli Gizi sehingga dapat ditentukan status gizi balita. Jadwal *home visit* menyesuaikan dengan kesempatan kader dengan lama waktu 5-10 menit per balita. Hambatan kader adalah dalam penentuan jadwal *home visit*.

### **ABSTRAK**

Efforts to deal with stunting continue to be carried out from various sectors, but the Covid-19 pandemic has been hampered. Tirta Siak Village, Payung Sekaki District, Pekanbaru City is a special location for stunting. The detection of stunting under five at the posyandu was turned into a home visit activity. This study aims to describe the home visit of posyandu cadres related to stunting under five as a result of the COVID-19 pandemic in Tirta Siak Village, Payung Sekaki District, Pekanbaru City. This study used descriptive qualitative method. The data used in the form of primary data obtained by interview and direct observation with one posyandu cadre. The data is presented in narratives and matrices and then compared between the concept statements and related theoretical concepts.

The results of the study showed that home visit activities were an alternative to posyandu during the COVID-19 pandemic, whose activities included measuring height, head circumference and weighing weight carried out by posyandu cadres. The schedule for carrying out home visits is adjusted to the opportunities for posyandu cadres because posyandu cadres have obstacles in carrying out home visits.
