**ABSTRAK**

AKI di Indonesia masih terkategori tinggi untuk cakupan Asia Tenggara. Upaya percepatan penurunan AKI dilakukan dengan menjamin agar setiap ibu mampu mengakses pelayanan Kesehatan yang berkualitas. Salah satu pendekatan yang dapat dilakukan untuk mewujudkan hal tersebut adalah *Continuity Of Care* (CoC) yaitu serangkaian kegiatan pelayanan yang berkelanjutan dan menyeluruh. Mulai dari kehamilan, persalinan, nifas, pelayanan bayi baru lahir serta pelayanan keluarga berencana. Studi kasus ini bertujuan untuk memberikan asuhan secara menyeluruh dan berkesinambungan pada Ny. F mulai dari hamil Trimester III, bersalin, nifas, bayi dan neonatus. Asuhan kebidanan diberikan kepada Ny. F G1P0A0H0 dimulai pada bulan September sampai dengan Desember tahun 2024 di PMB Zurrahmi. Asuhan kebidanan dilakukan meliputi 3 kali asuhan kehamilan, pertolongan persalinan, 4 kali asuhan nifas, dan 3 kali asuhan neonatus. Pada trimester III di temukan keluhan ibu sering meludah (Hipersaliva). Asuhan yang diberikan yaitu menjaga kebersihan mulut, mengkonsumsi air putih sebanyak 2L/ hari, menghindari makanan yang pedas, asam, dan berminyak, makan dalam porsi kecil tapi sering, dan mengunyah permen. Persalinan dilakukan sesuai dengan standar Asuhan Persalinan Normal (APN). Bayi lahir spontan, menangis kuat, jenis kelamin laki – laki, BB 2,900 gram, panjang badan 50 cm. Plasenta lahir spontan dan lengkap. Masa nifas berlangsung normal. Asuhan yang di berikan yaitu perawatan perineum, perawatan payudara, dan konseling alat kontrasepsi. Masa neonatus berlangsung normal. Asuhan yang di berikan yaitu, perawatan tali pusat, dan pijat bayi. Diharapkan bidan dapat mempertahankan serta meningkatkan mutu pelayanan asuhan kebidanan yang dilakukan secara *Contiuinity of Midwifery Care* pada ibu hamil, dan bersalin. Secara berkesinambungan sesuai dengan Standar Pelayanan Kebidanan.

**ABSTRAK**

MMR in Indonesia is still in the high category for Southeast Asia coverage. Efforts to accelerate the reduction of MMR are carried out by ensuring that every mother is able to access quality health services. One approach that can be taken to make this happen is Continuity of Care (CoC), which is a series of continuous and comprehensive service activities. Starting from pregnancy, childbirth, postpartum, newborn services and family planning services. This case study aims to provide comprehensive and continuous care to Mrs. F starting from third trimester of pregnancy, maternity, postpartum, infants and neonates. Midwifery care was provided to Mrs. F G1P0A0H0 starting in September until December 2024 at PMB Zurrahmi. Midwifery care provided includes 3 times pregnancy care, delivery assistance, 4 times postpartum care, and 3 times neonate care. In the third trimester, the mother complained of frequent spitting (Hypersaliva). The care given is maintaining oral hygiene, consuming 2L of water/day, avoiding spicy, sour and oily foods, eating small portions but often, and chewing candy. Delivery is carried out in accordance with Normal Childbirth Care (APN) standards. The baby was born spontaneously, cried strongly, male, weight 2,900 grams, body length 50 cm. The placenta was delivered spontaneously and completely. The postpartum period is normal. The care provided is perineal care, breast care, and contraceptive counseling. The neonatal period is normal. The care provided is umbilical cord care and baby massage. It is hoped that midwives can maintain and improve the quality of midwifery care services provided by Contiuinity of Midwifery Care for pregnant and giving birth mothers. Continuously in accordance with Midwifery Service Standards.
