

ABSTRAK

Yolla Rahmi Fitria (2024). Asuhan Keperawatan Pada Klien Yang Mengalami Halusinasi Pendengaran Di Ruang Mandau 2 Rumah Sakit Jiwa Tampan. Karya Tulis Ilmiah Studi Kasus, Program Studi D-III Keperawatan, Jurusan Keperawatan, Politeknik Kesehatan Kemenkes Riau. Pembimbing (I) Husnan, S.Kp., MKM, (II) Ns. Melly, SST., S.Kep., M.Kes.

Halusinasi adalah keadaan seseorang yang mengalami perubahan pola dan jumlah rangsangan atau ketidaknormalan respon terhadap setiap rangsangan. Berdasarkan data pendahuluan pada RSJ Tampan didapatkan halusinasi pendengaran di ruang Mandau 2 sebanyak 2036 dengan persentase halusinasi 84,64%. Tujuan dari peneliti adalah mendapatkan gambaran asuhan keperawatan jiwa pada pasien dengan masalah keperawatan gangguan persepsi sensori halusinasi pendengaran. Karya Tulis Ilmiah ini menggunakan desain penelitian studi kasus yang meliputi pengkajian, diagnosis keperawatan, intervensi keperawatan, implementasi keperawatan dan evaluasi keperawatan. Penelitian ini dilakukan dengan 2 subyek penelitian dan dilakukan pada tanggal 22-27 April 2024. Hasil penelitian menunjukkan bahwa 2 subyek mampu mengetahui jenis, isi, frekuensi, durasi, dan faktor pencetus halusinasi. Kedua subyek juga sudah pandai melakukan secara mandiri strategi pelaksana 1-4 halusinasi pendengaran dan gejala sudah berkurang. Peneliti berharap selanjutnya mengenai asuhan keperawatan jiwa pada pasien dengan masalah keperawatan gangguan persepsi sensori halusinasi pendengaran dapat dikembangkan lagi dengan melakukan penelitian lebih lama dan jumlah subyek yang lebih banyak.

Kata Kunci : Halusinasi Pendengaran, Strategi Pelaksana

ABSTRACT

Yolla Rahmi Fitria (2024). Nursing Care for Clients Who Experience Auditory Hallucinations in Mandau Room 2, Tampan Mental Hospital. Case Study Scientific Writing, D-III Nursing Study Program, Nursing Department, Riau Ministry of Health Health Polytechnic. Supervisor (I) Husnan, S.Kp., MKM, (II) Ns. Melly, SST., S.Kep., M.Kes.

Hallucinations are a person's condition who experiences changes in the pattern and number of stimuli or abnormal responses to each stimulus. Based on preliminary data at the Tampan RSJ, it was found that there were 2036 auditory hallucinations in the Mandau 2 room with a hallucination percentage of 84.64%. The aim of the researchers was to obtain an overview of mental nursing care for patients with nursing problems, sensory perception disorders, auditory hallucinations. This scientific paper uses a case study research design which includes assessment, nursing diagnosis, nursing intervention, nursing implementation and nursing evaluation. This research was carried out with 2 research subjects and was carried out on April 22-27 2024. The results of the research showed that the 2 subjects were able to know the type, content, frequency, duration and factors that trigger hallucinations. Both subjects are also good at carrying out strategies independently for implementing 1-4 auditory hallucinations and the symptoms have reduced. Researchers hope that further mental nursing care for patients with nursing problems, sensory perception disorders, auditory hallucinations, can be further developed by conducting longer research and a larger number of subjects.

Keywords: Auditory Hallucinations, Implementation Strategy
