ASUHAN KEBIDANAN KOMPREHENSIF PADA NY. A
DI PMB LILIS SUGIANTI PEKANBARU TAHUN 2025

±139 Halaman, 6 Tabel, 10 Lampiran

ABSTRAK

Bidan berperan penting dalam memberikan pelayanan ibu dan anak secara menyeluruh dan berkesinambungan. Asuhan komprehensif ini dilakukan untuk mendeteksi dini dan mencegah komplikasi pada masa kehamilan, persalinan, nifas dan neonatus. Asuhan secara menyeluruh dan berkesinambungan pada Ny. A G₂P₀A₁H₀ diberikan di PMB Lilis Sugianti kota Pekanbaru dari 20 November 2024 – 18 Januari 2025. Pada masa kehamilan dilakukan sebanyak 4 kali kunjungan, nifas 4 kali kunjungan, neonatus 3 kali kunjungan. Keluhan yang dialami oleh Ny. A adalah sering merasa kebas dibagian kaki, diberikan asuhan sesuai kebutuhan dan masalah dapat diatasi. Asuhan persalinan sesuai dengan Asuhan Persalinan Normal (APN) di Rumah Sakit Prima pada usia kehamilan 35-36 minggu, yang dimana Ny. A dirujuk dengan indikasi PPI. Partus prematurus imminens (PPI) adalah kondisi ketika ibu hamil merasakan tanda-tanda kelahiran sebelum usia kehamilan menginjak 37 minggu. Bayi lahir spontan pada 18 Desember 2024 pukul 22.48 WIB, BB: 2370 gram PB: 47,5 cm. Pada kunjungan masa nifas P₂A₁H₁ ASI belum lancar dilakukan asuhan teknik menyusui, pijat oksitosin sehingga ASI lancar. Pada kunjungan neonatus dilakukan pendidikan kesehatan mengenai ASI, jadwal imunisasi, pijat bayi, terjadi peningkatan berat badan bayi selama 42 hari sebanyak 100 gram. Diharapkan tenaga kesehatan khususnya bidan dapat melakukan asuhan kebidanan secara berkesinambungan dan berkelanjutan dimulai dari masa kehamilan, persalinan, nifas dan neonatus

ABSTRAK

Midwives play an important role in providing comprehensive and sustainable maternal and Child Services. This comprehensive care is carried out to detect early and prevent complications during pregnancy, childbirth, puerperium and neonates. Full and consistent with the NYSE. A G2P0A1H0 was given at PMB Lilis Sugianti Kota Pekanbaru from November 20, 2024-January 18, 2025. During pregnancy, 4 visits were made, puerperium 4 visits, neonates 3 visits. The complaint filed by Mrs. A is often felt numbness in the legs, given care as needed and the problem can be overcome. Delivery care in accordance with Normal delivery care (APN) at Prima Hospital at 35-36 weeks of gestation, which Mrs. A reference to the PPI indication. Partus prematurus imminens (PPI) is a condition when pregnant women feel the signs of birth before the gestational age of 37 weeks. The baby was born spontaneously on December 18, 2024 at 22.48 WIB, BB: 2370 gram PB: 47.5 cm. In the puerperal visit P2A1H1 breast milk has not been smoothly done nursing techniques, oxytocin massage so that breast milk lances. In neonatal visits conducted health education about breast milk, immunization schedule, baby massage, there was an increase in baby weight for 42 days as much as 100 grams. It is expected that health workers, especially midwives, can carry out midwifery care on an ongoing and sustainable basis starting from pregnancy, childbirth, puerperium and neonates
